Preface

To My Beloved Wife, My Precious Daughter and My Precious Son,

Dear Readers,

At a time when the change in current information is accelerating, attempts to compile new information and present it in book form are emerging.

There are many national and international books in the field of ophthalmology. A significant portion of these contain valuable information. However, no book covers retinal diseases that can only be seen in people of geriatric age. In general, articles in this field only address diseases that occur at relevant ages, and this is insufficient to describe all diseases at the mentioned age and period. Based on this, we prepared a book titled "Retinal Diseases and Management in the Geriatric Population."

This book has been prepared as an ideal book for ophthalmologists, retina specialists, geriatricians, and those working in these fields. We hope that this book will be a good resource and of great benefit.

We are happy to share our book with the readers. I would like to thank all the authors who shared their book chapters with the academic world through their publishing houses. I would like to express my sincere gratitude to the managers, editors, and employees of the publishing house for allowing us to publish these articles.

About MediHealth Academy and Thanks to

Dear Readers,

The MediHealth Academy is an Ankara-based independent publisher managed by academics of medical origin, with more than 20 years of academic background. The expert team collaborated with university lecturers and the academic community to produce book projects. The mission of the publisher is to lead journals containing high-scientific-value articles in the fields of medicine and health sciences to capture the diversity of regional and international articles and citations.

The main interest of MediHealth Academy Publishing is in scientific publications. Within the body of the MediHealth Academy, many books will both contribute to the scientific literature and guide the problems faced by experts in that field in daily practice, and book projects. The aim of the books and book chapters pioneered by the MediHealth Academy is to contribute to a high scientific value by preparing a subject in an area that lacks scientific knowledge.

We hope that this book series, which addresses ophthalmology in a certain age group and includes diseases and treatments of certain parts of the eye, will be useful to all readers. We will continue to support book projects that shed light on science.
