Preface

Dear Colleagues,

Approaching ocular diseases in the pediatric population requires not only scientific knowledge and skills but also social skills, such as effective communication and management of the child's interest.

Ocular diseases in the pediatric population and comorbid conditions associated with these diseases differ from those in adults. In addition, the approach to a child with low vision requires not only the rehabilitation of the child himself/herself but also of his/her family and environment. Pediatric ocular diseases have several unique characteristics. It is among the most important responsibilities of ophthalmologists to protect the eye health of our future children and to develop social approach skills for children with low vision.

This book has been carefully prepared by experts in the field and aims to provide the most up-to-date scientific data on approaches to ocular diseases in the pediatric patient group, comorbid conditions, and approaches to children with low vision, combined with clinical practice examples.

I would like to thank my colleagues and valuable members of the Medihealth Academy for their devoted and diligent work in writing and preparing this book for publication. I hope that this book will be useful to you and my esteemed colleagues, not only theoretically but also in terms of practical applications.

With my sincerest regards.

About MediHealth Academy and Thanks to

Dear Readers,

The MediHealth Academy is an Ankara-based independent publisher managed by academics of medical origin, with more than 20 years of academic background. The expert team collaborated with university lecturers and the academic community to produce book projects. The mission of the publisher is to lead journals containing high-scientific-value articles in the fields of medicine and health sciences to capture the diversity of regional and international articles and citations.

The main interest of MediHealth Academy Publishing is in scientific publications. Within the body of the MediHealth Academy, many books will both contribute to the scientific literature and guide the problems faced by experts in that field in daily practice, and book projects. The aim of the books and book chapters pioneered by the MediHealth Academy is to contribute to a high scientific value by preparing a subject in an area that lacks scientific knowledge.

We hope that this book series, which addresses ophthalmology in a certain age group and includes diseases and treatments of certain parts of the eye, will be useful to all readers. We will continue to support book projects that shed light on science.
