the Pediatric Population*

Preface

Dear Readers,

Following information emerging from advances in technology and scientific studies, all branches of science are rapidly evolving. Significant progress has been made in the diagnosis and treatment of eye diseases. Initiatives that aim to capture these developments and share them with the readers will continue to exist. For a scientist, putting effort into compiling and conveying the current scientific knowledge blended with experience and ultimately creating work is one of the sweetest fruits of the journey of science.

This book, which compiles "Lens Pathologies, Cataracts, Ocular Traumas, and Management in the Pediatric Population, " consists of subtopics. This comprehensive study addresses recent developments in the epidemiology, pathogenesis, risk factors, classification, clinical diagnosis, and treatment of eye diseases. The book is prepared as an ideal resource for ophthalmologists, pediatricians, and colleagues working in these fields. We are delighted to share this book, which we hope will be a valuable reference guide for readers.

I express my gratitude to all authors who shared their experiences and up-to-date information with the scientific community through the publisher. My deepest thanks go to the publishing house's executives, editors, and staff for providing the opportunity to publish our writing.

About MediHealth Academy and Thanks to

Dear Readers,

The MediHealth Academy is an Ankara-based independent publisher managed by academics of medical origin, with more than 20 years of academic background. The expert team collaborated with university lecturers and the academic community to produce book projects. The mission of the publisher is to lead journals containing high-scientific-value articles in the fields of medicine and health sciences to capture the diversity of regional and international articles and citations.

The main interest of MediHealth Academy Publishing is in scientific publications. Within the body of the MediHealth Academy, many books will both contribute to the scientific literature and guide the problems faced by experts in that field in daily practice, and book projects. The aim of the books and book chapters pioneered by the MediHealth Academy is to contribute to a high scientific value by preparing a subject in an area that lacks scientific knowledge.

We hope that this book series, which addresses ophthalmology in a certain age group and includes diseases and treatments of certain parts of the eye, will be useful to all readers. We will continue to support book projects that shed light on science.
