Preface

Dear Colleagues,

The book "Glaucoma and Management in the Pediatric Population" represents a dedicated effort to address a critical aspect of glaucoma in the often overlooked and unique context of pediatric patients.

The impetus behind this book arises from the recognition that pediatric glaucoma requires a nuanced approach, considering the developmental intricacies of the eye, diverse etiologies, and long-term implications of visual function. As clinicians, researchers, and educators in the field of ophthalmology, our collective goal was to provide a comprehensive resource that delves into the intricacies of pediatric glaucoma.

This book is structured to offer a systematic exploration of the epidemiology, pathophysiology, diagnosis, and treatment modalities for pediatric glaucoma. From the initial assessment to surgical interventions and long-term follow-up, each chapter was crafted to provide a thorough understanding of the complexities involved in managing glaucoma in the pediatric population.

We extend our gratitude to the contributors for their invaluable contributions, which have enriched this text and made it a reliable reference for seasoned practitioners and those entering the field.

This book serves as a beacon of knowledge, fostering a deeper understanding of pediatric glaucoma, and inspiring ongoing advancements in research and clinical practice. I express my deepest gratitude to my wife, who has been a constant source of strength and inspiration.

About MediHealth Academy and Thanks to

Dear Readers,

The MediHealth Academy is an Ankara-based independent publisher managed by academics of medical origin, with more than 20 years of academic background. The expert team collaborated with university lecturers and the academic community to produce book projects. The mission of the publisher is to lead journals containing high-scientific-value articles in the fields of medicine and health sciences to capture the diversity of regional and international articles and citations.

The main interest of MediHealth Academy Publishing is in scientific publications. Within the body of the MediHealth Academy, many books will both contribute to the scientific literature and guide the problems faced by experts in that field in daily practice, and book projects. The aim of the books and book chapters pioneered by the MediHealth Academy is to contribute to a high scientific value by preparing a subject in an area that lacks scientific knowledge.

We hope that this book series, which addresses ophthalmology in a certain age group and includes diseases and treatments of certain parts of the eye, will be useful to all readers. We will continue to support book projects that shed light on science.
