Preface

Dear Colleagues,

Books are the cornerstones of learning knowledge. Writing a book is an important responsibility in this period, when technology and medicine are rapidly developing. What is written today may become obsolete within to 5-10 years. Therefore, the information must be updated at certain intervals.

It is no longer possible to achieve rapid changes with a single author to cover all subjects. This work, with 7 authors, is a product of team spirit, labor, and effort. The editors motivated a group of writers who had the power and opportunity to write but could not make it happen. The author improved his ability to learn to teach, and the reader learned the subject he did not know before. In this manner, learning is achieved by both parties. The information acquired will become skilled over time, with experience and repetition.

Love and knowledge grow as they become shared. I hope that this book, which we have introduced to world medicine, will lead to the preparation of many new works in the future.

About MediHealth Academy and Thanks to

Dear Readers,

The MediHealth Academy is an Ankara-based independent publisher managed by academics of medical origin, with more than 20 years of academic background. The expert team collaborated with university lecturers and the academic community to produce book projects. The mission of the publisher is to lead journals containing high-scientific-value articles in the fields of medicine and health sciences to capture the diversity of regional and international articles and citations.

The main interest of MediHealth Academy Publishing is in scientific publications. Within the body of the MediHealth Academy, many books will both contribute to the scientific literature and guide the problems faced by experts in that field in daily practice, and book projects. The aim of the books and book chapters pioneered by the MediHealth Academy is to contribute to a high scientific value by preparing a subject in an area that lacks scientific knowledge.

We hope that this book series, which addresses ophthalmology in a certain age group and includes diseases and treatments of certain parts of the eye, will be useful to all readers. We will continue to support book projects that shed light on science.
