Lacrimal System, Orbital Diseases, Ocular Tumors, and
Management in the Geriatric Population

Preface

Dear Colleagues,

The average life expectancy continues to increase worldwide, particularly in developed countries. Therefore, there is a need for medical research on geriatric diseases. In ophthalmology, diseases such as cataracts, glaucoma, and age-related macular degeneration are most commonly observed in the geriatric population. On the other hand, many other eye diseases can also affect geriatric populations at varying frequencies.

This book was written to provide a comprehensive overview of the lacrimal System, orbital diseases, ocular tumors, and management in the geriatric population and covers the latest advances in the epidemiology, pathogenesis, risk factors, classification, clinical diagnosis, and treatment of eye diseases. This will be an ideal resource for ophthalmologists and geriatricians.

Each of the authors has spent a great deal of time and effort writing book chapters with equal pleasure that today is hoped, you dear reader, will derive from its pages.

About MediHealth Academy and Thanks to

Dear Readers,

The MediHealth Academy is an Ankara-based independent publisher managed by academics of medical origin, with more than 20 years of academic background. The expert team collaborated with university lecturers and the academic community to produce book projects. The mission of the publisher is to lead journals containing high-scientific-value articles in the fields of medicine and health sciences to capture the diversity of regional and international articles and citations.

The main interest of MediHealth Academy Publishing is in scientific publications. Within the body of the MediHealth Academy, many books will both contribute to the scientific literature and guide the problems faced by experts in that field in daily practice, and book projects. The aim of the books and book chapters pioneered by the MediHealth Academy is to contribute to a high scientific value by preparing a subject in an area that lacks scientific knowledge.

We hope that this book series, which addresses ophthalmology in a certain age group and includes diseases and treatments of certain parts of the eye, will be useful to all readers. We will continue to support book projects that shed light on science.
