Preface

Dear Colleagues,

Knowledge and best practices for uveitis are constantly changing. New research and experience broadens our professional practices and understanding, which leads to the need to be reported in new books.

Many books contain valuable information on uveitis, both nationally and internationally. However, there is always a need for new books containing updated information. The number of books describing the status of uveitis, especially in the geriatric population, is limited. Based on this point, we attempted to prepare a book with the main title "Uveitis and Management in the Geriatric Population" with subheadings. This comprehensive book covers the latest advances in epidemiology, pathogenesis, risk factors, classification, clinical diagnosis, and treatment of uveitis.

We hope that this book will be a good resource and of great benefit to ophthalmologists, geriatricians, and those working in these fields. We are happy to share our book with the readers.

I would like to thank all the authors who shared their book chapters with the academic world through their publishing houses. I would like to express my sincere gratitude to the managers, editors, and employees of the publishing house for giving us the opportunity to publish my articles.

About MediHealth Academy and Thanks to

Dear Readers,

The MediHealth Academy is an Ankara-based independent publisher managed by academics of medical origin, with more than 20 years of academic background. The expert team collaborated with university lecturers and the academic community to produce book projects. The mission of the publisher is to lead journals containing high-scientific-value articles in the fields of medicine and health sciences to capture the diversity of regional and international articles and citations.

The main interest of MediHealth Academy Publishing is in scientific publications. Within the body of the MediHealth Academy, many books will both contribute to the scientific literature and guide the problems faced by experts in that field in daily practice, and book projects. The aim of the books and book chapters pioneered by the MediHealth Academy is to contribute to a high scientific value by preparing a subject in an area that lacks scientific knowledge.

We hope that this book series, which addresses ophthalmology in a certain age group and includes diseases and treatments of certain parts of the eye, will be useful to all readers. We will continue to support book projects that shed light on science.
