PREFACE

Granulomatous lung diseases are a complex group of conditions that develop due to infectious and non-infectious causes, requiring the combined evaluation of clinical, radiological, and pathological findings in the diagnostic and treatment process. Therefore, the diagnostic process often necessitates interdisciplinary collaboration.

Multidisciplinary Approach to Granulomatous Lung Diseases, prepared as the first comprehensive and multidisciplinary reference book in Turkey to address granulomatous lung diseases with a holistic approach. This book, prepared with contributions from experienced specialist physicians in the field, covers a wide range of topics from the etiology and pathogenesis of granulomatous lung diseases to radiological, pathological, and laboratory findings, differential diagnosis, and clinical case examples.

Each chapter has been meticulously written in light of current literature and clinical experience, providing a guiding reference for diagnostic difficulties frequently encountered in practice. We believe this book will be a useful guide for physicians working in the fields of pulmonology, radiology, pathology, rheumatology, and internal medicine, both academically and in clinical practice.

We sincerely thank all our colleagues who contributed to the preparation of this book, and the MediHealth Academy Publishing team who supported us throughout the publication process.

With kind regards.
